FIFTH EDITION, NUMBER 5, "D."

---

NEW YORK :

THE WILLIAMS PRINTING CO., 5, 7 & 9 ELM STREET.

1887.

We have many designs that are not here illustrated. Should there not be found in Catalogue any design corresponding close enough to what is desired, send us sketch and description of ornament wanted, and in most cases we will be able to compose the ornament from designs in stock.

New designs made to order at reasonable rates. The cost of new dies will necessarily be added in the price of the article produced.

The list price on ornaments, as upon all other goods manufactured by us, is subject to a discount—to the trade only—which will be arranged by correspondence.

Our goods will at all times be sold as low as any others of equal merit.

IN presenting this Catalogue, our Fifth Edition of Sheet Metal Architectural Ornaments and Statuary, we wish to call the special attention of Architects and "The Trade" to the great number of new and beautiful Designs added since our last issue of 1884.

Our Stamping Department, which was destroyed by fire on March 5, 1886, has been rebuilt with more than double its former capacity, so that, with our present facilities for manufacturing this class of work, we can promise prompt and careful execution of all orders given to us. We have also more than doubled the capacity of our Spinning Department, and would call special attention to the price list for this class of work, which we have greatly reduced.

The Designs of Sheet Metal Statues, Figures, &c., herein shown, are a few selected from works recently executed by us. In perfection of modeling and beauty of outline, together with careful treatment of detail, they produce in Sheet Metal works of real artistic merit. All Statuary made by us are thoroughly and securely braced on a framework of iron, thus securing the greatest stability with the minimum weight, a Statue of Justice, 8 feet high, weighing about 130 pounds. We have in our employ some of the best Designers and Modelers in the country, and they, together with our large corps of skilled workmen, enable us to guarantee artistic treatment and perfect workmanship.

We have aimed in this edition, as we have in all previous issues, to illustrate only such designs as will meet the popular demand,

*avoiding all special designs not universally applicable. The size of each Ornament is given in connection with the cut of same, and all engravings being made from photographs of the work itself, accurate representation is thus secured. Zinc, on account of its cheapness and great durability, is most commonly used for Ornamental Sheet Metal Work, and is the material upon which the prices in this catalogue are based. We are prepared, however, to furnish any work herein described, made in either brass or copper, and will be pleased to quote prices on the same upon application.*

*We would call the attention of architects and others to the use of Sheet Metal Work for interior decoration for public buildings, theaters, churches, cathedrals, &c. By its use there is secured at a low cost the effect of any desired style of ornamentation, at the same time making perfectly fire-proof construction. We also desire to call the special attention of our patrons to the Telegraphic Cipher, found at the last of this book, in connection with the index and price list.*

*It is our aim to carry in stock all articles shown in this catalogue, but it is impossible always to have a complete stock on hand. We therefore request our patrons to send their orders as early as they can to avoid delay.*

Always state with each order whether you wish goods sent by Express or Freight.

BAKEWELL & MULLINS.

# ENRICHMENTS FOR MOULDINGS.

In construction, we recommend forming the iron moulding to such a profile as will allow the Enrichment a true and even bed. Trim the Enrichment close, and attach by solder only. By continuing the sheet-iron moulding under the Enrichment, a neater, stronger and better job is made. It will be found quite as cheap as the old plan of joining the Iron to the zinc Enrichment at each side, while the difficulties arising from contraction and expansion will be in the main removed.

Our Enrichments are struck in three to seven foot lengths, according to the nature of the design. They are so calculated as to allow matching with the least possible waste.

## PRESSED-ZINC CRESTINGS.

One of the neatest styles of finish for the top of a house or porch is Pressed-Zinc Crestings. They are fastened securely in position by a tube soldered into the back of the perpendicular parts, and which slip over a rod screwed to the roof.

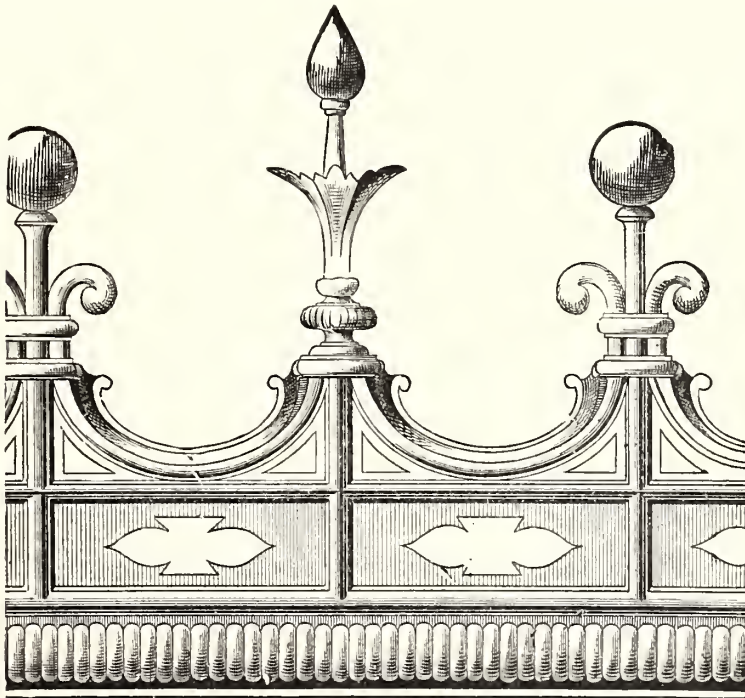

### DIRECTIONS.

A tube, made of zinc, galvanized iron or tin, from  $\frac{1}{2}$  to  $\frac{3}{4}$  inch diameter, according to size, is to be firmly soldered in the back of the cresting at intervals, according to pattern and height. The tubes should run nearly to the top of each spear-head or elevated portion of the cresting, and extend down to roof line, being continued below the bottom of the cresting according to the height it is to be set above the roof. A wrought-iron rod, in diameter corresponding to the size of the tube, with three to five inches of one end bent and flattened to form a foot, is to pass up each tube. The rod should be long enough to reach to the top of the tube. The flattened end should be provided with screw-holes for fastening to roof.

If it is desired to have the cresting finish at opposite corners with a similar figure or part of the design, find the center between the two corners and commence by laying the center of a section of cresting immediately over this point, and then join to it in each direction as may be required.

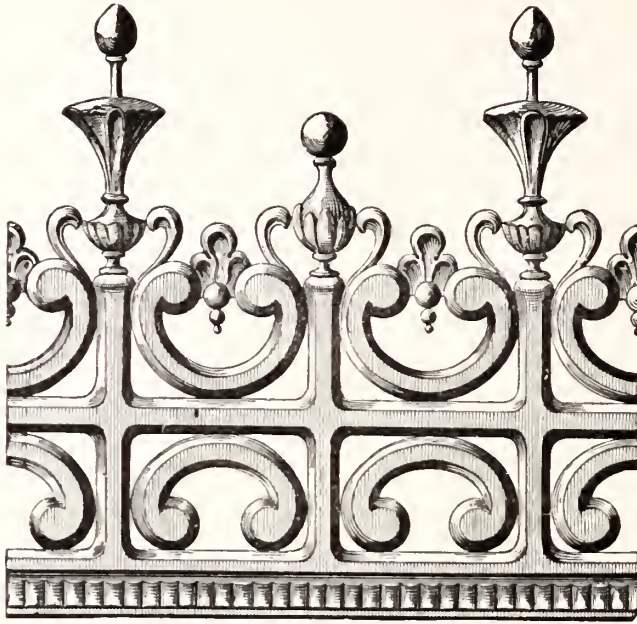

The sections of cresting must be soldered together. Cover the foot of each rod to make a water-tight joint.

Rods extra. Prices quoted on application.
